## Polo RE2050 / 202701

The durable Polo RE2050 has a sporty and modern design. Thanks to its light weight and the fine stretch quality, the polo is very comfortable to wear. This polo contains the Polygiene® technology: a permanent finish based on silver chloride that prevents unpleasant odours. This has the advantage that the professional can wear the polo for several days, resulting in fewer washes and therefore less water consumption, less energy consumption and above all maintaining the quality of the article. The reflective piping gives the polo a sporty and modern look and makes the professional extra visible. A ventilating mesh lining has been incorporated under the armpits and the button closure is neatly concealed. Polo RE2050 is part of the RE2050 package: a sustainable and circular clothing package. This polo is made from 92% recycled polyester and 8% elastane. Thanks to the use of recycled PET bottles, we use about 90% less water during production than with a polo with virgin polyester! This item is available in the colors Ink and Black and in the wide size range XS-5XL.
